What are the effects of computers on clinical decision making?

How does computerized physician order entry affect patient outcomes?

What are the unintended consequences of IT in health care?

Will expert systems eventually replace clinicians?

If any of these questions ever chagrin you, please join our inaugural Clinical Informatics Literature Review Seminar Series (BIOMEDIN 208) and find out the answers. BIOMEDIN 208 is taught by the leadership of the Stanford fellowship in clinical informatics, and we will review both historical and current literature in the field of clinical informatics in class. Students who attend all sessions will gain an appreciation of early seminal work as well as current opportunities.

Course Website: http://bmi208.stanford.edu

Location: Medical School Office Building (MSOB) X275 Conference Room

Lunch will be provided to enrolled students.
